This is the second edition of David Powers' highly-respected PHP Solutions: Dynamic Web Design Made Easy. This new edition has been updated by David to incorporate changes to PHP since the first edition and to offer the latest techniques—a classic guide modernized for 21st century PHP techniques, innovations, and best practices. You want to make your websites more dynamic by adding a feedback form, creating a private area where members can upload images that are automatically resized, or perhaps storing all your content in a database. The problem is, you're not a programmer and the thought of writing code

sends a chill up your spine. Or maybe you've dabbled a bit in PHP and MySQL, but you can't get past baby steps. If this describes you, then you've just found the right book. PHP and the MySQL database are deservedly the most popular combination for creating dynamic websites. They're free, easy to use, and provided by many web hosting companies in their standard packages. Unfortunately, most PHP books either expect you to be an expert already or force you to go through endless exercises of little practical value. In contrast, this book gives you real value right away through a series of practical examples that you can incorporate directly into your sites, optimizing performance and adding functionality such as file uploading, email feedback forms, image galleries, content management systems, and much more. Each solution is created with not only functionality in mind, but also visual design. But this book doesn't just provide a collection of ready-made scripts: each PHP Solution builds on what's gone before, teaching you the basics of PHP and database design quickly and painlessly. By the end of the book, you'll have the confidence to start writing your own scripts or—if you prefer to leave that task to others—to adapt existing scripts to your own requirements. Right from the start, you're shown how easy it is to protect your sites by adopting secure coding practices.

CakePHP is a leading PHP – based web app development framework. When asking a question on forums or chat rooms, many CakePHP beginners get little help from the experts. Simple questions can get a response like, “ Well, just read the online manual and API. ”

Unfortunately, the online manual is depreciated, and who wants to absorb a programming language or framework from an API? *Beginning CakePHP* will do the following: Lead

you from a basic setup of CakePHP to building a couple applications that will highlight CakePHP ' s functionality and capabilities without delving too deeply into the PHP language, but rather what the CakePHP framework can offer the developer. Teach you to use CakePHP by incorporating advanced features into your web development projects. Target beginners of CakePHP or web frameworks in general as well as experienced developers with limited exposure to CakePHP. A secondary audience may include developers undecided on adopting CakePHP or business managers trying to assess the value of incorporating CakePHP into their toolbox.

Before embarking on scripts, you have to start at the beginning: the syntax of PHP. This part is essential; if you do not know the basics of language at the fingertips, you will lose a lot of time later. PHP, The Web, What Is It? PHP, for PHP: Hypertext Preprocessor, is a programming language. There are many others, like C, Java, OCaml, but we can say that PHP is a programming language oriented for the Web or for websites. For the record, PHP was born at the hand of RasmusLerdorf in 1994. At

first very basic, it was made public in 1995 under the name of PHP / FI. Subsequently, the development passed from the hands of RasmusLerdorf to those of two students - ZeevSuraski and Andi Gutmans - who later founded Zend Technologies to promote PHP. If you develop applications with PHP, you will undoubtedly hear about Zend, whether through their framework, their development environment, or their server, respectively Zend Framework, Zend Studio, and Zend Server. Joomla! Mobile Development Beginner's Guide
"O'Reilly Media, Inc."

From rather humble beginnings as the Personal Home Page scripting language, PHP has found its way into almost every server, corporation, and dev shop in the world. On an average day, somewhere between 500,000 and 2 million coders do something in PHP. Even when you use a well-understood language like PHP, building a modern web application requires tools that decrease development time and cost while improving code quality. Frameworks such as Ruby-on-Rails and Django have been getting a lot of attention as a result. For PHP coders, the Zend Framework offers that same promise without the need to move away from PHP. This powerful collection of components can be used in part or as a whole to speed up the development process. Zend Framework has the backing of Zend Technologies; the driving force behind the PHP programming language in

which it is written. The first production release of the Zend Framework became available in July of 2007.
