#### *Boatowner's Illustrated Electrical Handbook* International Marine Publishing Company

The first in a series of highly practical, hands on, step-by-step photographic manuals, Replacing Your Boat's Engine fills a gap in the market for the DIY boat builder and repairer. It is a subject covered only in piecemeal fashion by the yachting press, which, like general boat repair manuals, can't go into the level of detail Mike Westin does. This is a visual, hand-holding guide, dwelling on the practical details of replacing a boat's engine and related systems as it explains each procedure rather than focussing on the theory (which is relegated to an appendix, for those who wish to go further). Anyone who wishes to upgrade their boat's engine or replace an ailing or broken engine will find this step-by-step illustrated book a hand-holding godsend.

#### Boatowner's Illustrated Handbook of Wiring A&C Black

This open access book engages with the response-ability of science education to Indigenous ways-of-living-with-Nature. Higgins deconstructs the ways in which the structures of science education—its concepts, categories, policies, and practices—contribute to the exclusion (or problematic inclusion) of Indigenous science while also shaping its ability respond. Herein, he undertakes an unsettling homework to address the ways in which settler colonial logics linger and lurk within sedimented and stratified knowledge-practices, turning the gaze back onto science education. This homework critically inhabits culture, theory, ontology, and history as they relate to the multicultural science education debate, a central curricular location that acts as both a potential entry point and problematic gatekeeping device, in order to (re)open the space of responsiveness towards Indigenous ways-of-knowing-in-being.
