Hexaflexagons and Other Mathematical Diversions SETA Anonimo Mexicano is the first publication of the full Nahuatl text and English translation of a rare and important Native history of preconquest Mexico. Written circa 1600 by an anonymous

Tlaxcaltecan author, it is an epic account of the settling of central Mexico by Nahua peoples from the northern frontier. They developed a sophisticated culture with powerful city states and an agricultural economy, fought great wars, established dynasties, and recorded their history and legends in painted books. The Mexica became the most powerful of these nations until their conquest by the Spanish with the help of the Tlaxcalteca, who were rivals of the Mexica and whose national origin tale was recorded in Anonimo Mexicano. American Poultry Advocate Oxford University Press on Demand This book covers novel research results for process and techniques of materials characterization for a wide range of materials. Whether we're buying a pair of jeans, ordering a cup of coffee, selecting a long-distance carrier, applying to college, choosing a doctor, or setting up a 401(k), everyday decisions—both big and small—have become increasingly complex due to the overwhelming abundance of choice with which we are presented. As Americans, we assume that more choice means better options and greater satisfaction. But beware of excessive choice: choice overload can make you question the decisions you make before you even make them, it can set you up for unrealistically high expectations, and it can make you blame yourself for any and all failures. In the long run, this can lead to decision-making paralysis, anxiety, and perpetual stress. And, in a culture that tells us that there is no excuse for falling short of perfection when your options are limitless, too much choice can lead to clinical depression. In *The Paradox of Choice*, Barry Schwartz explains at what point choice—the hallmark of individual freedom and self-determination that we so cherish—becomes detrimental to our psychological and emotional well-being. In accessible, engaging, and anecdotal prose, Schwartz shows how the dramatic explosion in choice—from the mundane to the profound challenges of balancing career, family, and individual needs—has

paradoxically become a problem instead of a solution. Schwartz also shows how our obsession with choice encourages us to seek that which makes us feel worse. By synthesizing current research in the social sciences, Schwartz makes the counter intuitive case that eliminating choices can greatly reduce the stress, anxiety, and busyness of our lives. He offers eleven practical steps on how to limit choices to a manageable number, have the discipline to focus on those that are important and ignore the rest, and ultimately derive greater satisfaction from the choices you have to make.

Shortlisted for the 2008 Katharine Briggs Award. For centuries the witch has been a powerful figure in the European imagination; but the creation of this figure has been hidden from our view. Charles Zika's

groundbreaking study investigates how the visual image of the witch was created in late fifteenth- and sixteenth-century Europe. He charts the development of the witch as a new visual subject, showing how the traditional imagery of magic and sorcery of medieval Europe was transformed into the sensationalist depictions of witches in the

pamphlets and prints of the sixteenth century.

This book shows how artists and printers across the period developed key visual codes for witchcraft, such as the cauldron and the riding of animals. It demonstrates how influential these were in creating a new iconography for representing witchcraft incorporating themes such as the power of female sexuality, male fantasy, moral reform, divine providence and punishment, the superstitions of non-Christian peoples and the cannibalism of the new world. Lavishly illustrated and encompassing in its approach, *The Appearance of Witchcraft* is the first systematic study of the visual representation of witchcraft in the later fifteenth and sixteenth centuries. It will give the reader a unique insight into how the image of the witch evolved in the early modern world.

Martin Gardner's Mathematical Games columns in *Scientific American* inspired and entertained several generations of mathematicians and scientists. Gardner in his crystal-clear prose illuminated corners of mathematics, especially recreational mathematics, that most people had no idea existed. His playful spirit and inquisitive nature invite the reader into an exploration of beautiful mathematical ideas along with him. These columns were both a revelation and a gift when he wrote them; no one--before Gardner--had written about mathematics like this. They continue to be a marvel. This volume, originally published in 1959, contains the first sixteen columns published in the

magazine from 1956-1958. They were reviewed and briefly updated by Gardner for this 1988 edition.

Dr Vlasto reviews the early history of the various Slav peoples (from about AD 500 onwards) and traces their gradual emergence as Christian states within the framework of either West or East European culture. Special attention is paid to the political and cultural rivalry between East and West for the allegiance of certain Slav peoples, and to the degree of cultural

exchange within the Slav world, associated in particular with the use of the Slav liturgical language. His examination of all the Slav peoples and extensive use of original source material in many different languages enables Dr Vlasto to give a particularly comprehensive study of the subject.

Culture, politics, economics and technology all impact upon policy decisions. To investigate the factors that influence communications policy, however, one has to go beyond conventional views of media and communication studies and combine these with policy studies.

Communications Policy: Theories and Issues utilizes new research to highlight key debates and

developments, and addresses a broad spectrum of contemporary concerns regarding the structure and the organization of communications systems in the past, present and future. Combining theoretical analysis with empirical research findings, this comprehensive text explores the contemporary theories and issues in communications policy that affect all democratic societies as they seek to address the challenges of emerging information and communications technologies. Featuring contributions from distinguished authors across a range of media disciplines, *Communications Policy* introduces challenging ideas about how communications should be structured in the future and is essential reading for all policy makers, researchers and students of communications policy. Editors: Stylianos Papathanassopoulos is Professor in Media Organization at the Faculty of Communication and Media Studies at the National and Kapodistrian University of Athens. He is the author of *Television in the 21st*

Century (2005), *Media and Politics* (2004) and *European Television in the Digital Age: Issues, Dynamics and Realities* (2002). Ralph Negrine is Professor of Political Communication in the Journalism Studies Department at the University of Sheffield. His previous books include *The Transformation of Political Communication* (Palgrave, 2008), *Television and the Press Since 1945* (1999) and *The Communication of Politics* (1996). Parasites have evolved independently in numerous animal lineages, and they now make up a considerable proportion of the biodiversity of life. Not only do they impact humans and other animals in fundamental ways, but in recent years they have become a powerful model system for the study of ecology and evolution, with

practical applications in disease prevention. Here, in a thoroughly revised and updated edition of his influential earlier work, Robert Poulin provides an evolutionary ecologist's view of the biology of parasites. He sets forth a comprehensive synthesis of parasite evolutionary ecology, integrating information across scales from the features of individual parasites to the dynamics of parasite populations and the structuring of parasite communities. *Evolutionary Ecology of Parasites* presents an evolutionary framework for the study of parasite biology, combining theory with empirical examples for a broader understanding of why parasites are as they are and do what they do. An up-to-date synthesis of the field, the book is an ideal teaching tool for advanced courses on the subject. Pointing toward promising directions and setting a research agenda, it will also be an invaluable reference for researchers who seek to extend our knowledge of parasite ecology and evolution.

The Wiley-Interscience Paperback Series consists of selected books that have been made more accessible to consumers in an

effort to increase global appeal and general circulation. With these new unabridged softcover volumes, Wiley hopes to extend the lives of these works by making them available to future generations of statisticians, mathematicians, and scientists. ". . . the wealth of material on statistics concerning the multivariate normal distribution is quite exceptional. As such it is a very useful source of information for the general statistician and a must for anyone wanting to penetrate deeper into the multivariate field."

-Mededelingen van het Wiskundig Genootschap "This book is a comprehensive and clearly written text on multivariate analysis from a theoretical point of view." -The Statistician Aspects of Multivariate Statistical Theory presents a classical mathematical treatment of the techniques, distributions, and inferences based on multivariate normal distribution. Noncentral distribution theory, decision theoretic estimation of the parameters of a multivariate normal distribution, and the uses of spherical and elliptical distributions in multivariate analysis are introduced. Advances in multivariate analysis are discussed, including decision theory and robustness. The book also includes tables

of percentage points of many of the standard likelihood statistics used in multivariate statistical procedures. This definitive resource provides in-depth discussion of the multivariate field and serves admirably as both a textbook and reference.

This book emphasizes past and current research efforts about principles of natural control of major parasites affecting humans, animals, and crops. Each chapter is a complete and integrated subject that presents a problem and confers on the safe alternatives to chemicals. This book discusses and updates information about three major topics of natural remedies.

The first topic is represented in a chapter outlining important information on biological control of parasites, the second topic is represented in three chapters dealing with botanicals as promising antiparasitic agents, and the last four chapters deal with miscellaneous control

strategies against parasites. This easily readable book is designed precisely for students as well as professors linked with the field of parasitic control. We enhanced words with breathing areas in the form of graphical abstracts, figures, photographs, and tables.

What is the difference between a wink and a blink? The answer is important not only to philosophers of mind, for significant moral and legal consequences rest on the distinction between voluntary and involuntary behavior. However, "action theory"—the branch of philosophy that has traditionally articulated the boundaries between action and non-action, and between voluntary and involuntary behavior—has been unable to account for the difference. Alicia Juarrero argues that a mistaken, 350-year-old model of cause and explanation—one that takes all causes to be of the push-pull, efficient cause sort, and all explanation to be prooflike—underlies contemporary theories of action.

Juarrero then proposes a new framework for conceptualizing causes based on complex adaptive systems. Thinking of causes as dynamical constraints makes bottom-up and top-down causal relations, including those involving intentional causes, suddenly tractable. A different logic for explaining actions—as historical narrative, not inference—follows if one adopts this novel approach to long-standing questions of action and responsibility.
