This book covers the full scope of biochemical sensors and offers a survey of the principles, design and applications of the most popular types of biosensing devices. It is presented in 19 chapters, written by 20 distinguished scientists as

well as their co-workers. The topics include the design of signal transducers, signal tags and signal amplification strategies, the structure of biosensing interfaces with new biorecognition elements such as aptamers and DNAzymes, and different newly emerging nanomaterials such as Au nanoclusters, carbon nitride, silicon, upconversion nanoparticles and two-dimensional materials, and the applications in wearable detections, biofuel cells, biomarker analyses, bioimaging, single cell analysis and in vivo sensing. By discussing recent advances, it is hoped this book will bridge the common gap between research literature and standard textbooks. Research into biochemical sensors and their biomedical applications is

The demand for oil and gas has brought exploration and production to unprecedented depths of the world's oceans. Currently, over 50% of the oil from the Gulf of Mexico now comes from waters in excess of 1,500 meters (one mile) deep, where no oil was produced just 20 years ago. The Deepwater Horizon oil spill blowout did much to change the perception of oil spills as coming just from tanker accidents, train derailments, and pipeline ruptures. In fact, beginning with the Ixtoc 1 spill off Campeche, Mexico in 1979-1980, there have been a series of large spill events originating at the sea bottom and creating a myriad of new environmental and well control challenges. This volume explores the physics, chemistry, sub-surface oil deposition and environmental impacts of deep oil spills. Key lessons learned from the responses to previous deep spills, as well as unresolved scientific questions for additional research are highlighted, all of which are appropriate for governmental regulators, politicians, industry decision-makers, first responders, researchers and students wanting an incisive overview of issues surrounding deep-water oil and gas production.

In the tradition of *Kabul Beauty School* and *Start Something That Matters* comes an inspiring story of social entrepreneurship from the co-founder of Kiva, the first online microlending platform for the working poor. Featuring lessons learned from successful businesses in the world's poorest countries, Jessica Jackley's *Clay Water Brick* will motivate readers to more deeply appreciate the incredible entrepreneurial potential that exists in every human being on this planet—especially themselves. “The heart of entrepreneurship is never about what we have. It's about what we do.” Meet Patrick, who had

next to nothing and started a thriving business using just the ground beneath his feet . . . Blessing, who built her shop right in the middle of the road, refusing to take the chance that her customers might pass her by . . . Constance, who cornered the banana market in her African village with her big personality and sense of mission. Patrick, Blessing, Constance, and many others are among the poorest of the world's poor. And yet they each had crucial lessons to teach Jessica Jackley—lessons about resilience, creativity, perseverance, and, above all, entrepreneurship. For as long as she could remember, Jackley, the co-founder of the revolutionary microlending site Kiva, had a singular and urgent ambition: to help alleviate global poverty. While in her twenties, she set off for Africa to finally meet the people she had long dreamed of helping. The insights of those she met changed her understanding. Today she believes that many of the most inspiring entrepreneurs in the world are not focused on high-tech ventures or making a lot of money; instead, they wake up every day and build better lives for themselves, their families, and their communities, regardless of the things they lack or the obstacles they encounter. As Jackley puts it, "The greatest entrepreneurs succeed not because of what they possess but because of what they are determined to do." In *Clay Water Brick*, Jackley challenges readers to embrace entrepreneurship as a powerful force for change in the world. She shares her own story of founding Kiva with little more than a laptop and a dream, and the stories and the lessons she has learned from those across the globe who are doing the most with the least. Praise for *Clay Water Brick* "Jessica Jackley didn't wait for permission to change the world—she just did it. It turns out that you can too."—Seth Godin, author of *What to Do When It's Your Turn* "Fascinating . . . gripping . . . bursting with lessons . . . Jessica Jackley has written a remarkable book . . . so thoroughly well meaning and engagingly put it is too magnetic to put down."—Financial Times "Clay

*Water Brick* is a tremendously inspiring read. Jessica Jackley, the virtuoso co-founder of the revolutionary microlending platform Kiva, shares uplifting stories and compelling lessons on entrepreneurship, resilience, and character."—Adam Grant, author of *Give and Take* "A blueprint for anyone who wants to make the world a better place and find fulfillment in the process, no matter how scarce their resources or how steep the challenge."—Arianna Huffington "This book is inspirational. And honest and practical. . . . Well written, thoughtful: a selfless account of how to succeed by doing right and following your heart."—Booklist

This textbook, originally by D. Annand and H. Dauderis, was intended for a first course in introductory financial accounting. It focuses on core introductory financial accounting topics that match pre-requisite requirements for students advancing to Intermediate Financial Accounting. A corporate approach is utilized versus beginning with a sole proprietorship emphasis and then converting to a corporate approach; this consistency throughout the book reduces confusion for the introductory student. This most recent revision by D. Marchand converted the text from IFRS to reflect the Generally Accepted Accounting Principles of the United States (U.S. GAAP).

The book “Advances in Biotechnology” is about recent advances in some of the important fields that are ongoing in certain biotechnological applications. Biotechnology has been quite helpful in keeping pace with the demands of every increasing human population and in improving the quality of human life. Major biotechnological achievements associated with human welfare have been from the fields like genetic engineering; transgenic plants and animals; genomics, proteomics, monoclonal antibodies for the diagnosis of disease, gene therapy etc. Fourteen authoritative chapters written by experts having experience in academics and research on current developments and future trends in biotechnology have been empathized. The book provides a detailed account of various methodologies used in biotechnology i.e. High capacity vectors, DNA sequencing dealing with next generation sequencing, Molecular markers, DNA microarray technology, as well as Proteomics that have revolutionized biotechnology with a wide array of applications. The book not only presents a well-founded explanation of the topics but also aims to present up-to-date reviews of current research efforts, some thoughtful discussions on the potential benefits and risks involved in producing biotechnological products and the challenges of bringing such products to market. It will prove to be an excellent reference work for both academicians and researchers, indicating new starting points to young researchers for new projects in the field. The book is intended for biotechnologist, biologist, researchers, teachers and students of Biosciences and Biotechnology.

From the original Guns N’ Roses drummer comes a tale of sex, drugs, excess, hairspray, and an intense 20-year struggle with addiction. Guns N’ Roses is one of the world’s most successful rock bands, with estimated sales of 90 million albums worldwide. Steven Adler is the original drummer, with an infamous past of

sex, drugs, and rock ‘n’ roll that led to his removal from the band. And here, for the first time, Steven Adler tells it all. In *My Appetite for Destruction*, he reveals with wit and candour his personal struggles with drug addiction, including the financial ruin he faced after being kicked out of Guns N’ Roses and the health problems that almost claimed his life several times—two heart attacks, a suicide attempt, and a debilitating stroke, as well as an epic 20-year addiction to crack and heroin. Now clean and sober, Steven sets the record straight on his life and his time with Guns N’ Roses, during the rise and collapse of one of the greatest rock bands of all time. “Great for the die-hard GNR fan . . . This is a cautionary tale, all the way.” —Penthouse

This book presents recent research on ancient Silk Road wall paintings, providing an up-to-date analysis of their coloring materials and techniques, and of developments in efforts to preserve them. The destruction of the Bamiyan Buddhas in 2001 encouraged international collaboration between conservation research institutes to study and protect the Silk Road's painted heritage. The collaborations led to exciting new discoveries of the rich materials used in wall painting, including diverse pigments and colorants, and various types of organic binding media. In addition, comparative research across the region revealed shared painting practices that indicate the sophisticated exchange of technologies and ideas. In parallel with these advances in technical understanding, greater awareness and sensitivity has been fostered in endeavors to preserve this fragile heritage. The book offers insights obtained from conservation projects and ongoing research, that encompass the geographical regions and periods related to the Silk Road, including from Japan, China, Korea, India and Afghanistan, and countries of the Eastern Mediterranean region. It also discusses the current issues and future challenges in the field. Featuring concise chapters, the book is a valuable resource for students and professionals in the field of cultural heritage preservation, as well as those who are not familiar with the fascinating topic of Silk Road wall painting research.
