Pros and Cons: A Debaters Handbook offers a unique and invaluable guide to the arguments both for and against over 140 current controversies and global issues. Since it was first published in 1896 the handbook has been regularly updated and this nineteenth edition includes new entries on topics such as the right to possess nuclear weapons, the

bailing out of failing industries, the protection of indigenous languages and the torture of suspected terrorists. Equal coverage is given to both sides of each debate in a dual column format which allows for easy comparison. Each entry also includes a list of related topics and suggestions for possible motions. The introductory essay describes debating technique, covering the rules, structure and type of debate, and offering tips on how to become a successful speaker. The book is then divided into eight thematic sections, where specific subjects are covered individually.

Each volume in the 7-volume series *The World of Science Education* reviews research in a key region of the world. These regions include North America, South and Latin America, Asia, Australia and New Zealand, Europe and Israel, North Africa and the Middle East, and Sub-Saharan Africa. The focus of this Handbook is on research in science education in mostly former British colonies in Sub-Saharan Africa and the scholarship that most closely support this program. The reviews of the research situate what has been accomplished within a given field in Sub-Saharan Africa rather than an international context. The purpose therefore is to articulate and exhibit regional networks and trends that produced specific forms of science education. The thrust lies in identifying the roots of research programs and sketching trajectories - focusing the changing façade of problems and solutions within regional contexts. The approach allows readers to review what has been done and accomplished, what is missing and what might be done next.
