This is the first volume in the English language to cover the entire range of the geology of Thailand since the joint Thai-US account by Brown et al. exactly 60 years ago. Over this period there has been a phenomenal growth in interest in this core area of SE Asia. This has been led by geologists in Thailand, but with important

and highly significant input from geologists based elsewhere in Asia and in Europe, Australasia and North America. Some of that research was prompted by commercial considerations, since Thailand has important energy and mineral resources, while other research has sought to understand better the stratigraphic and structural history, including the plate-tectonic story which Thailand's rocks reveal. This new volume seeks to bring together all of this knowledge into a single accessible book; it is the work of an international team drawn from Thailand, Japan, Australia, USA, Canada, Germany and the UK.

This collection provides new ways to understand how state power was exercised during the overlapping Liao, Song, Jin, and Yuan dynasties. Through a set of case studies, *State Power in China, 900-1325* examines large questions concerning dynastic legitimacy, factional strife, the relationship between the literati and the state, and the value of centralization. How was state power exercised? Why did factional strife periodically become ferocious? Which problems did reformers seek to address? Could subordinate groups resist the state? How did politics shape the sources that survive? The nine essays in this volume explore key elements of state power, ranging from armies, taxes, and imperial patronage to factional struggles, officials' personal networks, and ways to secure control of conquered territory. Drawing on new sources, research methods, and historical perspectives, the contributors illuminate the institutional side of state power while confronting evidence of instability and change—of ways to gain, lose, or exercise power.
