Winner of the 2003 Nobel Prize in Literature. J. M. Coetzee presents a coherent, unorthodox analysis of censorship from the perspective of one who has lived and worked under its shadow. The essays collected here attempt to understand the passion that plays itself out in acts of silencing and censoring. He argues that a destructive dynamic of belligerence and escalation tends to overtake the rivals in any field ruled by censorship. From Osip Mandelstam commanded to compose an ode in praise of Stalin, to Breyten Breytenbach writing poems under and for the eyes of his prison guards, to Aleksander Solzhenitsyn engaging in a trial of wits with the organs of the Soviet state, Giving Offense focuses on the ways authors have historically responded to censorship. It also analyzes the arguments of Catharine MacKinnon for the suppression of pornography and traces the operations of the old South African censorship system. "The most impressive feature of Coetzee's essays, besides his ear for language, is his coolheadedness. He can dissect repugnant notions and analyze volatile emotions with enviable poise."—Kenneth Baker, San Francisco Chronicle Book Review "Those looking for simple, ringing denunciations of censorship's evils will be disappointed. Coetzee explicitly rejects such noble tritenesses. Instead . . . he pursues censorship's deeper, more fickle meanings and unmeanings."—Kirkus Reviews "These erudite essays form a powerful, bracing criticism of censorship in its many guises."—Publishers Weekly "Giving Offense gets its incisive message across clearly, even when Coetzee is dealing with such murky theorists as Bakhtin, Lacan, Foucault, and Ren é ; Girard. Coetzee has a light, wry sense of humor."—Bill Marx, Hungry Mind Review "An extraordinary collection of essays."—Martha Bayles, New York Times Book Review "A disturbing and illuminating moral expedition."—Richard Eder, Los Angeles Times Book Review

This is the latest edition of our classic COBOL book that has set the standard for structured design and coding since the mid-1970s. So if you want to learn how to write COBOL programs the way they're written in the best enterprise COBOL shops, this is the book for you. And when you're done learning from this book, it becomes the best reference you'll ever find for use on the job. Throughout the book, you will learn how to use COBOL on IBM mainframes because that's where 90% or more of all COBOL is running. But to work on a mainframe, you need to know more than just the COBOL language. That's why this book also shows you: how to use the ISPF editor for entering programs; how to use TSO/E and JCL to compile and test programs; how to use the AMS utility to work with VSAM files; how to use CICS for developing interactive COBOL programs; how to use DB2 for developing COBOL programs that handle database data; how to maintain legacy programs. If you want to learn COBOL for other platforms, this book will get you off to a good start because COBOL is a standard language. In fact, all of the COBOL that's presented in this book will also run on any other platform that has a COBOL compiler. Remember, though, that billions of lines of mainframe COBOL are currently in use, and those programs will keep programmers busy for many years to come.

Wilderness mythology is one of the most abiding creations in the history of religions, and yet it has not previously been subject to scrutiny or theorizing from a cross-cultural, "study-of-religions perspective". This book addresses the need for cross-cultural anthropological and history of religions analyses by offering in-depth case studies of the use and functions of wilderness spaces in diverse religions. It offers new theoretical perspectives on the study of religious spatialities, cosmologies, and ideas of wild nature that challenge previous dichotomizing approaches.

In the far future, Earth is about to be swallowed by a black hole in this sweeping SF epic from one of the masters of the genre. In a time so far from our own that we cannot comprehend it, humanity has spread amongst the stars and changed in more ways than we can count. But they have never forgotten their birthplace - Earth. But now Earth stands on the brink of catastrophe, at risk of being swallowed by a black hole. One man, Hanosz Prime, ruler of his world, is determined to visit Earth before it is destroyed. His abdication from his throne and his wanderlust are to prove the beginning of a much longer journey - one that will see him fall in love, meet the Oracles of Earth and perhaps, if he is very lucky, provide a means to save the cradle of humanity. Originally started by Robert Silverberg more than 20 years ago but never completed, Hanosz's story is taken up by Alvaro Zinos-Amaro. Silverberg hand-picked Zinos-Amaro to complete the book, and provided notes and guidance. The result is a remarkable collaboration between one of the masters of SF and one of the most exciting new voices in the genre.

Fueled by media reports of gender bias in the schools, the debate over single sex education has been recently renewed. "Voices of Hope" asks for a reconsideration of the framing of that debate. For whom is single sex education better? For the attainment of which goals? What do girls gain by being schooled with male peers? What is lost? In this longitudinal study of more than fifty high school girls at four New England independent schools, Carole B. Shmurak follows their development from ninth grade through the first year of college. Case studies capture the girls' own voices as they describe their hopes for their futures and the events that subsequently affect those futures.
